

Announcing a New Free ISM Upgrade!

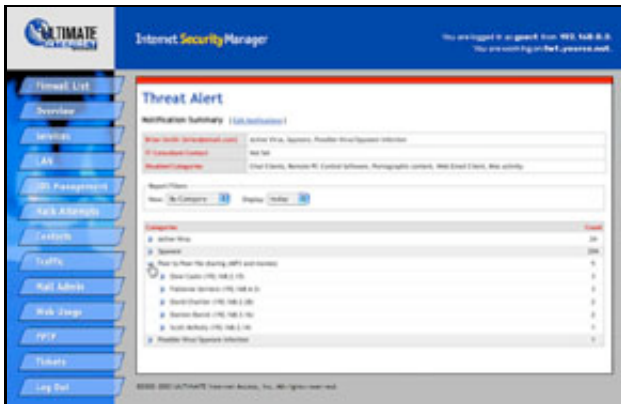

Threat Alert Don't Let Your PC Become a Zombie!

Spyware can turn your PC into a Zombie without you or your Network Administrator ever being aware. This [CNN article](#) does a good job of explaining what a PC Zombie is and how it can affect your network. Seemingly harmless applications might contain potentially malicious spyware. Your very key strokes could be logged, sending important network information, private company records, and even bank account information directly to criminals.

[Threat Alert](#) is a new **free** upgrade to the Internet Security Manager, and is already installed and active on your ISM right now!

For assistance in setting up notifications, call your ISM administrator at **800.982.6898**.

Persistent

Threat Alert constantly watches over your local network/LAN for signs of a virus or spyware infection.

Precise

Threat Alert pinpoints the exact workstations that are infected by IP and by NetBios name.

Notification

Threat Alert will automatically notify via Email when an infection is detected.

Outside network consultants can be included in the notifications.

Summary

Daily summaries are sent out everyday detailing which workstations are infected.

If you have any questions about this announcement please contact your sales representative at **800.982.6898**
