

New ISM Security Feature Announcement!

UIA is pleased to announce another new feature for the Internet Security Manager. Whether it is from your home or on the road, it is becoming essential to connect remotely to access files, email and even important client contact information.

With this feature you will be able to connect from anywhere there is Internet access directly to your office network. We are calling this new feature SSL VPN. SSL VPN does not require user names and passwords instead you will have certificate files loaded directly on your laptop or home PC. With one click you will be connected directly to your office LAN from any location.

If you already have our current VPN technology PPTP enabled on your Internet Security Manager then you will receive this new feature at NO additional cost. PPTP will still be there for you but SSL VPN can be activated at anytime.

There are some big advantages to using SSL VPN.

1. No need for user names or passwords when connecting. SSL VPN is certificate based, meaning once you install the certificate on your laptop or home machine thats all that is needed. Just right click and select your connection from the system tray and you are connected. It could not be easier.

Certificates		
Name	Status	Action
Server Master	Active	Recreate
Clients		Create New

2. Once connected you can browse your network just like you're there. This makes it very easy to remote into any machine on your network that has remote desktop enabled by just typing the name of the machine, no need to know that specific IP address. It is a bridged connection meaning your laptop or home computer will see regular LAN broadcast traffic.
3. Many hotels and hot spots do not allow special protocols and so PPTP and other types of VPN connectivity can be a difficult challenge on the road. SSL VPN does not use special protocols as in the case of PPTP. Making on the road connections just that much easier.
4. Complete logging enables the network administrator to see who is connecting and when.

Currently Connected Public Clients					
Wed Sep 6 17:12:18 2006					
Client Name	Connecting IP	Bytes Received (KB)	Bytes Sent (KB)	Time Connected	Action
lrc-23342.lrc.com	207.65.12.4	5,234	2,204	00:23:16:02	Disconnect
joe.firsthanding.com	67.122.37.56	1,254	152	00:00:20:14	Disconnect
jBC2742.cmse.org	157.168.45.5	28	2,204,560	01:04:36:09	Disconnect

Last Client Logons			
Client Name	Connecting IP	Time Logged On	Total Time Connected
james.local	172.196.14.23	Mon Sep 4 16:55:19 2006	00:00:01:01
jeff.laptop	62.78.145.15	Fri Sep 1 12:21:07 2006	00:01:06:16
bethPC.home	155.180.202.96	Fri Sep 1 11:35:29 2006	00:00:45:42

If you do not currently have a way to connect remotely to your office please contact your sales rep at **800.982.6898** to get this feature activated.
