

## Web Activity - Feature Upgrade!

Do you really know how much time your employees spend on surfing personal sites?

According to the Websense sponsored [Web@Work 2005 Internet usage survey](#), 64% of men and 54% of women use the Internet for personal use while at work. As the Internet becomes more integrated into everyone's lives it's hardly surprising.

Our popular Web Usage feature has just been upgraded. Now called **Web Activity**, you can not only get web surfing history, but you can see surfing in real-time while it's happening. Most company policies allow for some personal surfing, but Web Activity can reveal when it goes beyond modest browsing. Grouped by user, this powerful tool can spot potential company policy violations as they happen.

### EXCLUDING

Monitor only the people you want. Anyone can be excluded from all monitoring or web surfing history.

### DOCUMENTING

Web surfing history goes back four months. History can be printed off anytime and placed in an employee file.

### LIABILITY

Do you know what and where everyone in your company is surfing? According to the Web@Work survey, 23% of male employees have surfed pornography sites at work. This is exposing their company to potential Sexual Harassment law suits.

This feature can be activated anytime within minutes on your ISM. If you have any questions about this announcement please contact one of our technicians at **800.982.6898**
