

Web Content Filter

One of the most daunting technology issues in the workplace today is employee use of the Internet for non-work-related reasons. Not only does personal Internet use in the workplace decrease productivity and cost money, but it also opens businesses to legal liability issues and security risks. Additionally, network resources can be severely compromised by employees spending their time surfing streaming video and other high-bandwidth sites.

The Internet Security Manager Team is pleased to announce the comprehensive solution for controlling web surfing in the workplace -- the ISM Web Content Filter (WCF). This new feature, which is available for multi-user ISM customers with the ISM version 5 or version 6 software, allows users to easily assign web surfing policies for individual computers or groups of computers on the LAN. One can block large groups of sites, such as "adult sites", "online radio", or "sports news", or individual sites. The WCF provides the ultimate level of control over Internet resources.

The Web Content Filter is available for a monthly fee of \$15 to \$50, depending on the number of users. For additional information, please contact your sales executive at 800.982.6898, or by e-mail at .

Thank you,

The ISM Team
